Turns Your Apparatus Off

Turns Your Equipment On

Before You Get There . . . After You Have Gone . . .

The **ANTICIPATION TIMER**

Works For You

AUDIBLY and VISIBLY!

FEATURES:

- The flashing light — silently warns of approaching end of the time cycle.
- The must-answer buzzer signal — indicates end of time cycle.
- Adjustable buzzer intensity through a simple turn of a screw.
- High capacity switch.
- Either buzzer or flashing light signal can be used independently; thus, use of flashing light may be advisable at nursing stations or where sound signals may disturb lab animals.

BETTER THREE WAYS!

Prior warning and continuous signals — the flashing red light allows proper timing for any important timed tests. The technician can be there when the time is almost up.

Accurate long life timing — Anticipation Timer's synchronous motor drive with specially designed motor clutch guarantees continuous accuracy — outlasts other timers!

Fully Automatic — equipped with two separate receptacles . . . apparatus is turned on or off automatically. You just set the dial — Anticipation Timer does the rest!

SPECIFICATIONS

Receptacles — 2

Control Switches — 2 (entire timer; light buzzer).

Time Ranges: Each Anticipation Timer model is for one time cycle.

Capacity — 15 amp load - 110V, 60C, AC

CASE —
